

To Achieve the Best Performance with Your Sound ID 200 Headset:

- Place the phone in a belt holder or maintain a line-of-sight. Holding the phone in your hand reduces the wireless signals.
- Having the mobile phone on the opposite side as your headset or behind you will reduce wireless signals. Keep the mobile phone and headset on the same side, preferably line-of-sight. If you experience intermittent static, reposition the phone to find the best reception.

DO

DON'T

- As you increase the separation between your phone and your headset the wireless signal strength will be reduced and will produce static and/or disconnect. Reduce the distance.
- If you put your phone in a purse or briefcase, keep the purse or briefcase on the same side as the headset.

NoiseNavigation™ Demonstration

You can demonstrate the effect of NoiseNavigation™ by turning it “Off” and “On” during a call. To turn all noise reduction “Off”, press and hold the Volume button for two seconds until you hear two beeps. To turn noise reduction back “On”, press and hold the Volume button until you hear one beep.

Using the Sound ID Headset with Blackberry Phones

If you have a Blackberry phone, we recommend using the following instructions to turn 'Echo Control' off.

- 1) Navigate to "**Setup Bluetooth**"
- 2) Highlight the "**Sound ID 200**"
- 3) Press the Menu button
- 4) Select "**Device Properties**" from the list
- 5) In the device properties screen, set "**Echo Control**" to off.
- 6) Press the Escape key (to the right of the trackball) and select "**Save**".
